

**Question:** How many babies  
are born each year who  
reside in the Zone?

Exploring data from the U.S. Census Bureau  
and the NYC Department of Health and Mental Hygiene

## **Specific Question HCZ is looking to answer:**

How many babies are born each year who reside in the Zone?

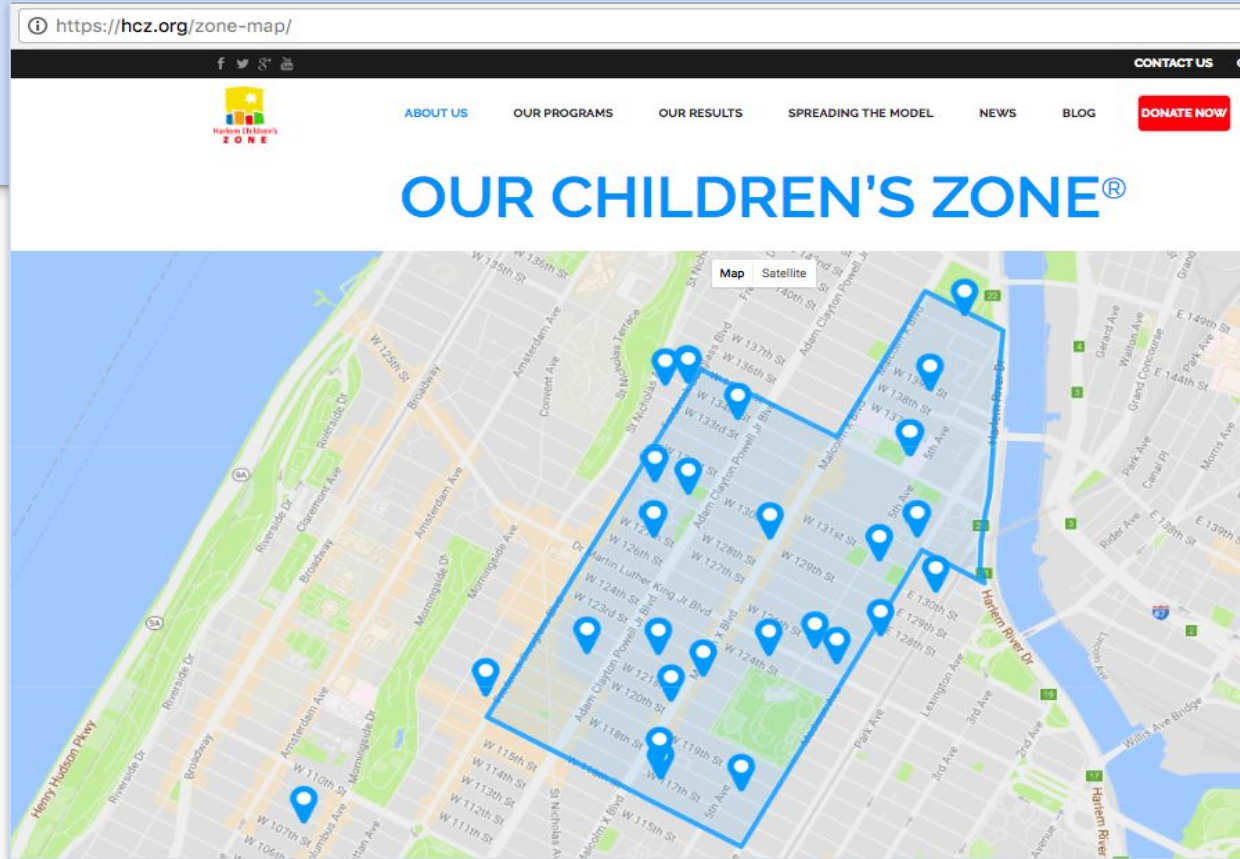

# Project Goals

- **Minimum Goal:** Find better matching data
- **Ideal Goal:** Build a model to approximate the number of children born each year in the Zone

# Deliverables

- Google Map
- Resources
- Data Sets
- Recommendations

# The Zone - HCZ

# Initial Findings:

## Public Data Sets

- **Source:**

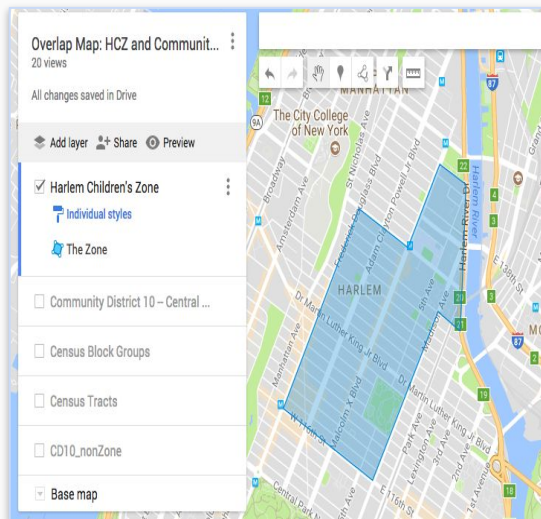

NYC Department of Health and Mental Hygiene, Bureau of Vital Statistics

- **2 Geographic Areas:**

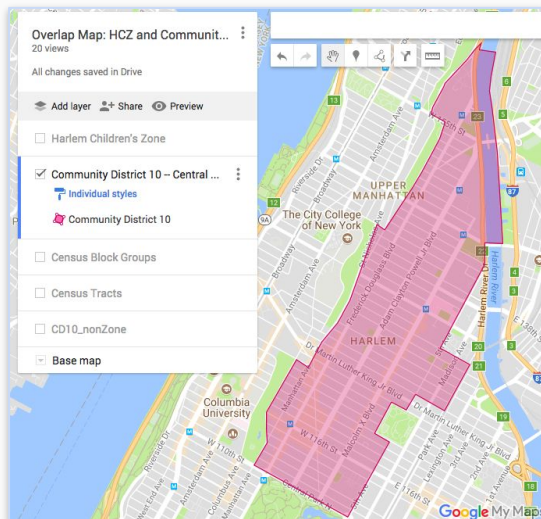

- Community District 10
- Census Tracts (within The Zone)

# Initial Findings: Public Data Sets

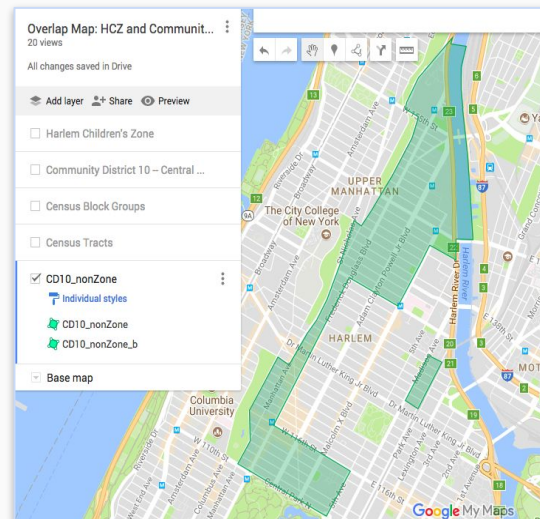

## The Zone

## Community District 10

## CD10, Non-Zone

# Initial Findings: Public Data Sets

## Birth Micro SAS Datasets

The Community District (CD) and Zip Code (ZC) micro-datasets include one-way and two-way counts of maternal and birth characteristics. The Census Tract (CT) Datasets include one-way counts *only*. For all datasets, cells smaller than four have been censored. [Descriptions of the Datasets](#) (PDF).

# **Demographic Comparison:**

## The Zone and Community District 10

Can data for the population in Community District 10 be used as a 'proxy' data set for the population within the Zone?

# Comparison:

## American Community Survey (ACS) and Census Data

Survey	Purpose	Data Collection
Decennial Census (Long-Form)	Provide counts of people for the purpose of congressional apportionment and legislative redistricting.	Cross-sectional snapshot of the U.S. population, once every 10 years.
ACS	<p>Measure the changing social and economic characteristics of the U.S. population.</p> <p>ACS estimates are controlled to match the Census Bureau’s annual population estimates, by age, sex, race, and Hispanic origin.</p>	ACS data is produced every year, but in exchange for this benefit, the sample size of the ACS is considerably smaller than that of the Census 2000 long-form sample.

# Demographic Comparison: Public Data Sets

- **American Community Survey (ACS)**
  - American Fact Finder
  - 5 year estimates for the period of 2011 – 2015
  - Block group level

# Demographic Comparison: Defining "Areas of Interest"

- Census block groups were used to filter ACS data sets (via their GEOIDs).
- Utilized [Google Overlap Map](#) to identify which block groups fell into the areas of interest.
- Certain block groups were excluded

# Demographic Comparison: Overview of Analysis

- Compared percentages of total population for the following demographic attributes:
  - Gender, Age Groups, Race, Hispanic or Latino Origin, Household and Family Type, and Household Income
- Data Tables: (5-yr) Counts and Percent of Sample Population
- Stacked bar charts
- Population Pyramid
- Q-Q Plots

# Demographic Comparison: Brief Overview of Q-Q Plots

- The q-q plot is used to answer the following questions:
  - Do two data sets come from populations with a common distribution?
  - Do two data sets have common location and scale?
  - Do two data sets have similar distributional shapes?
  - Do two data sets have similar tail behavior?

Figure 11. q-q plots of normal data.

Figure 12. q-q plots for standardized non-normal data (n = 1000).

## Recommended Next Steps

- Use the EpiQuery Natality Module provided and maintained by the NYC Department of Health and Mental Hygiene, Bureau of Vital Statistics.
  - Step 1 -- Go to the following link: <https://a816-healthpsi.nyc.gov/epiquery/Birth/index.html>
  - Step 2 -- Choose year of interest and click 'SUBMIT'
  - Step 3 -- Choose 'Community District of Residence' on right-side menu and click 'SUBMIT'
  - Step 4 -- Download dataset and filter for Community District == Central Harlem (110)
- Explore available data resources for Community District 10:
  - <https://statisticalatlas.com/neighborhood/New-York/New-York/Harlem/Overview>
  - <https://censusreporter.org/profiles/79500US3603803-nycmanhattan-community-district-10central-harlem-puma-ny/>

# Demographic Comparison:

## Conclusion

In conclusion, the sample populations within the Zone and Community District 10 are similar enough to validate the use of Community District 10 data resources to the answer the question “How many babies are born each year who reside in the Zone?”
